HARSUKH DHALIWAL

Brampton, ON | 289-952-9329 | harsukhd2002@gmail.com | https://github.com/XHat3rXDazeX/advanced-pytest-framework

TECHNICAL SKILLS

Languages & Core Engines:	Python, SQL, HTML5, CSS3, JavaScript
Automation Frameworks:	Pytest, Playwright (Sync/Async), Selenium WebDriver
Architecture & Testing Patterns:	Page Object Model (POM), API Interception & Mocking, Data-Driven Testing
DevOps & Infrastructure:	GitHub Actions, CI/CD Cloud Pipelines, Git, VS Code, Linux (Ubuntu)

QA AUTOMATION PROJECT CENTERPIECE

Lead SDET & Framework Architect | Open-Source Git Portfolio Project

Enterprise Hybrid UI & API Test Automation Platform Framework

- **Engineered Modular Page Object Models (POM):** Completely decoupled dynamic web DOM element paths from core testing assertions using object-oriented Python classes, slashing scripting maintenance overhead by 50% across functional suites.
- **Implemented Isolated Browser-Level API Mocking:** Architected offline test routing wrappers via browser tab network context intercepts; defeated environment network dependencies and cloud server request latency to achieve fast, isolated execution loops.
- **Orchestrated GitHub Actions Cloud Pipelines:** Formulated automated branch-tracking workflows (`main.yml`) that auto-provision clean Ubuntu virtual nodes, install package environments, pull web browsers, and push live build status badges.
- **Constructed Data-Driven Configurations:** Structured a secure, override baseline framework (`pytest.ini` / `settings.py`) to fully filter background execution noise and safely handle credentials without hardcoding source secrets.

PROFESSIONAL EXPERIENCE

Logistics Operator & Client Service Specialist | *Independent Contractor* **2020 – Present**

- Systematically audited high-volume inventory accuracy and tracked logistical transport data parameters prior to routing, maintaining a 100% precision and compliance rate across thousands of client data packets.
- Leveraged on-the-spot technical hardware troubleshooting and critical thinking to resolve systemic delivery constraints, preserving top-tier client safety metrics.

Operations Crew Member | *Wendy's* **May 2022 – Oct 2022**

- Executed rapid point-of-sale (POS) financial transaction entries and data transfers with extreme accuracy under strict, fast-paced time constraints.
- Coordinated with cross-functional service teams to monitor operational workflows and uphold stringent quality control and visual inventory hygiene benchmarks.

Office Assistant | *Woodwal Law Office* **Feb 2019 – Jun 2019**

- Managed the systematic entry, categorization, and secure indexing of physical and digital business files into reference databases, maintaining data integrity with zero discrepancies.

EDUCATION & COMP-SCI BACKGROUND

Bachelor of Science Coursework (Computer Science Focus) **2021 – 2023**

Wilfrid Laurier University – Waterloo, ON

- Completed intensive academic fundamentals in core Object-Oriented Programming (OOP) architectures, function layouts, condition execution loops, script logic syntax, and programmatic problem-solving.
